**ABSTRACT OF THE DISCLOSURE**

1  
2 A slopeboard mounting device having near a first end a means for attaching a rigid shaft  
3 to a slopeboard frame and having near a second end a means for indicating the desired location  
4 of a mounting lug. The rigid shaft has such a shape and size that the means for indicating is  
5 maintained at a desired position with respect to the first end of the rigid shaft which is the same  
6 position as is desired for a lug pivot point to have with respect to the slopeboard frame. And,  
7 preferably, the shape and dimensions of the rigid shaft are selected such that any obstructions are  
8 avoided by such rigid shaft.
